

Case History

PromiGroup

Project and realization of 2 meeting rooms

The Project

For an important company that manages the integrated water service in 139 Italian Municipalities, PromiGroup has designed and realized 2 modern and dynamic meeting rooms, equipped with the best technologies of the IT market.

The hardware equipment supplied, combined with the planning, has allowed the users to benefit of 2 highly technological meeting rooms, both in separate and combined way. Therefore, PromiGroup has created a modern location, able to combine the functionality and the efficiency requested with the aesthetics of the building.

PromiGroup

After a first step of valuation, made with a team of architects, recruited by the company client, we have shown to the customer 3 possible development scenarios, which respected the strong architectural and aesthetic onstraints.

In this 1st step we've shown to the client the technology proposed in a formative campus realized in our location, to provide a better comprehension of the functionality of the product offered. For example there's the innovative wireless collaboration solutions which makes the users able to edit, share and see the files streamed live, with every kind of laptop or mobile.

***Reactivity to requests.
Respect of timeline.***

“ We decided to **realize 2 multifunctional meeting rooms** to improve the autonomy of the employees during the meetings, avoiding the need to have the IT staff present to give support.____
PromiGroup accepted our requests, showing **reactivity to our requirements** and showing us the project with a campus, which allowed us to **test the product proposed**.
PromiGroup has been commissioned just before Christmas, without prior notice, and it was able to deliver the meeting rooms at the end of February, **respecting the timeline agreed**.

Now we are dealing with a project of room booking, to manage the meeting rooms just concluded, and to realize other 6 meeting rooms in other our offices.”
